CEMENT DECORATION BOARD

Cement Decoration Boards are fiber-cement panels engineered to deliver the industrial aesthetic of concrete while enhancing durability, moisture resistance, and structural stability. Manufactured using plant fibers blended with cement, these panels achieve improved toughness, sound insulation, and weather resistance, making them suitable for both interior and exterior applications. Available in multiple thicknesses, sizes, and customizable colors, Cement Decoration Boards support architectural flexibility and personalized design concepts. Their Class A fire rating and waterproof properties ensure reliable long-term performance in commercial, residential, and public environments. The panels can be cut, drilled, and engraved, allowing designers to create bespoke textures and patterns that elevate feature walls and facades. Installation is straightforward using stud frameworks and mechanical fixing systems, enabling efficient construction with reduced maintenance requirements. Cement Decoration Boards provide a versatile decorative solution that combines raw material aesthetics with modern performance standards, making them an excellent choice for contemporary architectural projects.
